Bachelor of Science, Mechanical Engineering*

EXPERIENCE

Lee Schifer is Senior Vice President of Infrastructure Modernization and Sustainment and Deputy Nuclear Operations Officer for Savannah River Nuclear Solutions (SRNS) at the U.S. Department of Energy's (DOE) Savannah River Site (SRS). In this capacity, he is responsible for Site Services, Construction Services and the Project Delivery Organization. He also serves as Deputy Nuclear Operations Officer overseeing all current nuclear operations at SRS.

Schifer is an industry veteran with over 30 years of diverse nuclear leadership with high hazard nuclear operations, engineering, project construction/start-up, security and emergency preparedness at the Nuclear Security Enterprise.

Schifer has also served as the Savannah River Plutonium Processing Facility (SRPPF) Program Owner's Chief Engineer, where he managed all Design Authority requirements for the design and construction of the multi-billion-dollar facility.

Much of Schifer's career at SRS has been directly supporting the nuclear weapons stockpile for the Tritium mission, Safeguards and Security and SRPPF. Starting out his career with Westinghouse shortly after receiving his degree, he rose through the ranks of SRNS Engineering and Operations from a shift employee to an Engineering Manager, Facility Manager and eventually the Director of Tritium Facilities.

During his tenure in the Tritium Facilities, Schifer supported the recapitalization of the facility to include the construction and commissioning of the Replacement Tritium Facility (HANM), the Tritium Extraction Facility and the Tritium Consolidation Project. While leading the Safeguards, Security and Emergency Services organization, Schifer was also the Corporate Security Officer for SRNS and the Officially Designated Security Authority for SRS.
